

T Series Tubular Deadbolts by BEST

Premium materials, security, and performance.

Incorporating top quality design, engineering, and materials, BEST's T Series tubular deadbolts are easy to install, integrate, and rely on for durable security. Our T Series deadbolts provide for simple installation, without compromising security and performance. Solid construction and a 1" stainless steel throw bolt offer enhanced durability and extra protection, while design features like tapered cylinder rings and optional hidden mounting screws make T Series deadbolts attack resistant. T Series tubular deadbolts deliver the quality and reliability you expect from BEST.

The BEST T Series consists of two strong options for extra security.

The 6T and the 8T both fit standard door preps. The 6T can be found in low-security areas, such as bathrooms or storage rooms. The 8T is often paired with a cylindrical lock in commercial office spaces, residential applications and other spaces where there is a greater need for security—and, more specifically, a deadbolt that is more resistant to brute force attack.

- **Premium materials.** Our T Series deadbolts are made of top quality materials that provide corrosion resistance and durability.
- **Enhanced security.** We use a solid stainless steel bolt with full 1" throw in each T Series deadbolt for extra protection. Optional concealed mounting screws and a free-turning tapered cylinder ring provide added vandal resistance (for 8T only).
- **Easy installation.** T Series deadbolts are non-handed, making installation quick and easy.

The T Series delivers premium protection thanks to advanced design features and top quality materials chosen for exceptional strength and durability.

BEST T Series tubular deadbolts deliver quality, security, and performance through premium materials and design.

Simple installation, serious security.
